SUMMARY

- Software Engineer with 4 years of experience building scalable full-stack web applications and AI-powered automation solutions. Proficient in developing modern applications using React, Next.js, TypeScript, Node.js, and PostgreSQL, with experience designing serverless and event-driven architectures on AWS. Experienced in leveraging Anthropic Claude and OpenAI GPT for AI-assisted software development, prompt engineering, workflow automation, and LLM API integrations. Strong background in building production systems, RESTful APIs, cloud infrastructure, CI/CD pipelines, automated testing, and cross-functional collaboration throughout the software development lifecycle.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Framer Motion, Responsive Design
- **Backend:** Node.js, Express.js, RESTful APIs, Serverless Functions, Webhooks
- **Programming Languages:** TypeScript, JavaScript (ES6+), Python
- **Databases & CMS:** PostgreSQL, MongoDB, DynamoDB, Redis (Upstash), Sanity CMS
- **Cloud & Infrastructure:** AWS (Lambda, CDK, SQS, SES), Vercel, DigitalOcean, Docker, Docker Compose
- **AI & Automation:** Anthropic Claude, OpenAI GPT API, Prompt Engineering, LLM API Integration, AI Workflow Automation, Zapier, Twilio, Green API (WhatsApp)
- **Testing & Quality:** Playwright (End-to-End), Cypress (End-to-End), Jest (Unit & Integration), Postman (API Testing)
- **Monitoring:** Azure Application Insights
- **DevOps:** Git, GitHub, GitLab, GitHub Actions (CI/CD), pnpm Workspaces (Monorepo)
- **Project Management:** Jira, Confluence, Huly, Asana
- **Design & Collaboration:** Figma

WORK EXPERIENCE

Freelance Full-Stack & AI Automation Engineer
Freelance Work
2026

- Built and shipped 6 production client websites from a single pnpm monorepo using Next.js 16, React 19, and TypeScript, integrating Sanity CMS to enable client-managed content and SEO while following modern SDLC practices and Git-based workflows.
- Leveraged Anthropic Claude and OpenAI GPT to accelerate full-stack software development and AI automation, including feature implementation, code review, debugging, refactoring, documentation, prompt engineering, AI output validation, structured data extraction, API integrations, and production-ready AI workflows.

- Automated WordPress-to-modern-stack migrations with custom Python tooling that extracts content, media, and SEO metadata from legacy sites and converts it into typed content, transforming manual rebuilds into a repeatable automation pipeline.
- Built an AI-powered WhatsApp invoice automation system using the OpenAI API to extract, classify, and validate invoice data from images and PDFs before synchronizing expenses to DoorLoop. Implemented prompt engineering, stateful conversations with Redis, SHA-256 duplicate detection, and a human review/edit workflow to improve AI output quality and reliability.
- Designed and implemented automation workflows using Zapier, integrating third-party APIs and services to automate notifications (Email, Slack), scheduling (Google Calendar, Google Meet), and business processes, reducing manual operational tasks.
- Implemented Azure Application Insights for end-to-end observability, monitoring frontend user interactions and backend API performance to support debugging, performance optimization, and production reliability.
- Deployed and maintained production applications on Vercel and DigitalOcean (Docker + Caddy), integrating serverless APIs, Resend, and Upstash Redis while managing CI/CD and production deployments.

Software Engineer

Ingenuity Software – Davao City, Philippines

2022 - 2026

- Develop and maintain full-stack applications using React.js, Next.js, Node.js, Express.js, and TypeScript.
- Design and implement RESTful APIs and backend microservices with PostgreSQL and AWS Lambda.
- Utilize AWS services such as SQS, SES, and CDK for serverless deployment and infrastructure automation.
- Build responsive frontend interfaces using Material-UI, Tailwind CSS, and ShadCN UI based on Figma designs.
- Manage state and form logic using React Hooks, React Context, React Hook Form, and RTK Query.
- Develop and execute integration and E2E tests with Vitest and Playwright.
- Collaborate through GitHub for version control, code reviews, and CI/CD workflows.

Backend Developer – ERP System

2022 – 2023

- Built and refactored backend services using Node.js, Express.js, and PostgreSQL.
- Integrated enterprise systems with RESTful APIs.
- Developed workflow automation, error monitoring, and notification features via AWS SES and SQS.
- Deployed serverless functions using AWS Lambda

Frontend Developer – Golf Online Booking App

2023

- Converted Figma designs into responsive, production-ready user interfaces using Next.js, TypeScript, Material UI, and Tailwind CSS, ensuring a seamless experience across desktop, tablet, and mobile devices.

- Developed reusable React components, implemented form validation using React Hook Form, and integrated REST APIs to support booking, authentication, and user management features.
- Collaborated with designers and backend developers to deliver intuitive user experiences, optimize application performance, and maintain clean, scalable, and reusable code.

Frontend Developer – Confide Platform *(Whistleblowing Web App)*
2023 – 2024

- Developed responsive user interfaces from Figma designs using React.js, Material UI, Tailwind CSS, and ShadCN UI.
- Built reusable components, managed state with React Context and RTK Query, and implemented forms using React Hook Form.
- Integrated REST APIs and migrated UI components from Material UI to Tailwind CSS to improve maintainability and performance.

Backend Developer – Serverless Infrastructure
2024 – 2025

- Developed backend services using Python, TypeScript, AWS Lambda, and DynamoDB in a serverless architecture.
- Defined and deployed cloud infrastructure using AWS CDK, collaborating with the team to manage scalable AWS resources.
- Built and integrated backend APIs, business logic, and database operations to support application features.

Backend Developer – Automated Publishing Platform
2025

- Developed backend automation features using Django to schedule and publish content across multiple social media platforms.
- Implemented API integrations and scheduling logic for automated content publishing.
- Prepared technical documentation and integration requirements for the Meta Developer Platform, including app configuration, Privacy Policy, Terms of Service, and API compliance.
- Ensured platform integrations met Meta's developer requirements to support production deployment.

Frontend Developer – Streetlight Monitoring & Reporting App
2025 - 2026

- Designed and developed a responsive, user-friendly interface for a multi-role collaboration platform used by Admins, Barangay Officials, General Users, Crew Members, and Team Members.
- Built dynamic report history tables, sortable lists, and filtered views for tracking progress across all stages of the streetlight issue lifecycle.
- Integrated frontend with backend APIs to synchronize real-time status updates, crew activities, report timelines, and user feedback.
- Enhanced overall UX using React.js, Tailwind CSS, and ShadCN UI, ensuring consistent component design and smooth interactions across devices.

Laboratory Aide
Philippine Rubber Testing Center
2019 - 2022

- Created data visualizations to support lab analysis.
- Organized and maintained lab documentation, including calibrations and team travel.
- Communicated with clients and stakeholders, supporting lab manager in daily operations.
- Ensured accurate data entry and efficient record-keeping.

EDUCATION

Bachelor of Science in Computer Science **June 2015 - June 2019**
University of Southern Mindanao
